

OVERVIEW OF CLASSROOM PRESENTATIONS

KCB provides free environmental education programming to any and all classrooms in the public, private and parochial schools of Greater Cincinnati. One of our environmental educators will travel to your classroom (up to 30 students) to present a fun, informative, and interactive program. We typically see all classrooms of the same grade when we visit so please collaborate with your fellow teachers.

A word to the wise — our programs are quite popular and our schedule fills very quickly. Be sure to call as soon as you know what your classrooms' needs will be. Below are capsules of each of our program offerings.

NATURAL RESOURCE CONSERVATION OUTREACH

Compost Stew (Grades PK-2) - We'll read the book *Compost Stew* and follow along by creating our own batch of "compost". Students will learn how the earth recycles and why it's important for us to do things, like compost, to reduce the amount of waste we create. (30 minutes)

Fred the Fish (Grades K-4) - Fred is a little fish whose curiosity gets the best of him as he sets out to explore the Mill Creek. He has no idea that there is a lot more than water in the water! We will follow Fred on his journey and see the effects of water pollution on wildlife as well as discuss what we can do to help keep the water clean. (30 minutes)

Water, Water Everywhere (Grades 3-12) – This program allows students to appreciate how little water is actually available for human use with a hands-on demonstration of water availability. Students discuss how humans use water, understand the importance of managing this resource carefully and formulate ideas to conserve water and maintain a quality supply. (45 minutes)

The Mystery of Landfills (Grades 3-12) - What happens to our trash after it is picked up at curbside? What is the difference between a dump and a sanitary landfill? How are landfills designed to minimize the effects of solid waste disposal on our environment? Using a model of a landfill to visually depict the components of its design, we will discuss the answers to these and other questions. (45 minutes)

Wonders of the Sun (Grades 3-12) - Students are able to better appreciate the many uses of our Sun. Students will gain an understanding of what solar energy is, how it is used, and about the greenhouse effect. They will utilize observation and inquiry to familiarize themselves with the Sun's energy through an activity with UV color changing beads. (45 minutes)

Understanding your Carbon Footprint (Grades 3-12) - Students will learn about greenhouse gasses, global warming, and uncover the biggest contributors to their individual "footprint." They will also learn how to calculate their carbon footprint and encouraged to share this with their families. We will discuss ways to alter their daily living in order to make a positive impact on the environment. (45 minutes) **we strongly recommend having the Wonders of the Sun program first*

LITTER PREVENTION OUTREACH PROGRAMS

Jitter, Don't Litter (Grades PK -1) - This is a story that will set your kids' toes to tappin'. With colorful characters from the story *How Spider Stopped the Litterbugs*, we'll dance and sing our way to the realization that everyone (even kids) can help keep our city litter-free. (30 minutes)

How Litter Hurts Animals (Grades PK-2) - All children have a warm spot in their hearts for animals. In this program we introduce children to the idea that litter not only makes the neighborhood look trashy, it can also harm pets and other wild creatures. Through the use of a puppet show and age-appropriate discussions, we will establish a connection that is deep and meaningful to them. (30 minutes)

RECYCLING OUTREACH PROGRAMS

Recycle This! (Grades PK-2) - This program teaches students about the different options to "throw away" common items. We will discuss how these items can be recycled, composted or donated, and why it's important to keep them out of the landfill. Students will put their new knowledge to the test and practice sorting items into these different waste avenues. (30 minutes)

Eco-Art (Grades 2-6) - After a brief review and discussion of the three R's, children will tap into their creative side to explore the reuse leg of the reduce-reuse-recycle triangle. We'll put this into practice through craft-making utilizing items usually destined for the landfill, which students get to take home! We provide the craft materials but request that each class supply its own glue, scissors, and crayons or markers. (30 minutes)

Paper Recycling (Grades 2-6) - This is one of our most popular programs. Students learn where paper comes from, its history, its future, and why recycling paper is beneficial to the environment. Then they will operate their own paper recycling factory and produce recycled paper right in your classroom. (45 minutes)

Recycle That Resource (Grades 3-12) - This program involves a discussion about the natural resources from which different kinds of recyclable items are made. We will touch on the difference between renewable vs non-renewable resources, extraction methods and their impact on environment. Students will learn how recycling saves resources, landfill space and energy. (45 minutes)
